EDUCATION

- **National Institute of Technology, Kurukshetra** 2022 – 2026
B.Tech in Information Technology CGPA: 7.80
- **Sri Krishna Public High Secondary School** 2020 – 2021
MP Board (Class XII) Aggregate: 90%

EXPERIENCE

- **LEAP Finance** Jan 2026 – June 2026
Software Engineer Intern Bengaluru
 - Designed and shipped production RESTful APIs in **Kotlin** and **Spring Boot**, owning features end-to-end from **PostgreSQL** schema design to production release.
 - Eliminated intermittent API timeouts on multi-filter search across 2M+ records by integrating **Elasticsearch**, cutting response times by over 95% to under 1s.
 - Optimized hot read paths by removing N+1 queries, adding composite indexes, and using DTO projections in PostgreSQL.
 - Versioned database schemas with **Liquibase** migrations, ensuring reliable, repeatable rollouts across environments.
- **Olcademy (Startup)** June 2024 – August 2024
Backend Developer Intern Remote
 - Developed REST APIs for an admin dashboard managing users, content listings, and reviews, implementing role-based access control to secure admin and moderator workflows.
 - Built server-side search, filtering, and pagination, replacing full-collection fetches and reducing dashboard load times on large datasets.
 - Added request validation and centralized error handling across API endpoints, reducing malformed-data bugs reaching the database.

PERSONAL PROJECTS

- **Training & Placement Management System** 2024
MongoDB, Express.js, React.js, Node.js, Vercel Live Link
 - Built a role-based placement portal serving **1000+ students**, companies, admins, and coordinators, automating job postings, eligibility filtering, and live application tracking.
 - Implemented automated eligibility checks against student academic data, eliminating manual shortlisting by placement coordinators.
 - Secured the platform with JWT-based authentication, role-specific dashboards, and protected routes, isolating student, coordinator, and admin capabilities.
- **Reckon — Double-Entry Wallet & Payments Ledger** 2026
Kotlin, Spring Boot, PostgreSQL, Flyway, Docker GitHub
 - Built an append-only **double-entry ledger** as the sole money-writing module, guaranteeing zero balance drift and no double-spends under concurrent transfers.
 - Enforced correctness under concurrency via fixed-order pessimistic row locking (**FOR NO KEY UPDATE**), committing ledger entries and balance updates atomically to eliminate deadlocks and race conditions.
 - Implemented **idempotency keys** on all money-movement APIs, making retries and duplicate requests safe by design.

TECHNICAL SKILLS AND INTERESTS

Languages: Kotlin, Java, SQL, Python, JavaScript, C++

Frameworks: Spring Boot, Express.js, React.js, Flask

Databases/Cloud: PostgreSQL, Elasticsearch, MongoDB, Firebase, AWS

Developer Tools: Git, Docker, Postman, Liquibase, VS Code, Jupyter, Vercel

Core Skills: REST API Development, System Design, Database Design, Performance Optimization

Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Machine Learning, Computer Networks

POSITIONS OF RESPONSIBILITY

- **Tech Head**, Antariksh – Astronomy Club, NIT Kurukshetra 2023 – 2024
- **Event Organizer**, Innovation Cell, NIT Kurukshetra – BidBizz (Finance Event) 2023

ACHIEVEMENTS

- **Smart India Hackathon**, cleared internal round — top 10 of 200 teams at NIT Kurukshetra 2024
- **Workshop Organizer**, conducted a data analytics workshop attended by 500+ students 2023
